

In the Claims:

- Claim 3 is amended.

AMENDMENTS TO THE CLAIMS

1. (Previously amended) A method of presenting a search result comprising:
determining categories for found information by analyzing the content of the
5 information;
correlating the categories with images that represent the categories; and
displaying images that correspond to the categories;
wherein images corresponding to the found information are displayed when a
user activates one of the categories.

10

2. (Cancelled)
3. (Currently amended) A method of presenting a search result as recited in claim 2
1, wherein the user activates one of the categories by dragging a cursor over the image
15 that corresponds to the category.
4. (Original) A method of presenting a search result as recited in claim 1 wherein
the display is a grid.
- 20 5. (Original) A method of presenting a search result as recited in claim 1, wherein the
information includes a plurality of web sites.
6. (Original) A method of presenting a search result as recited in claim 5, further
including providing a rotating display of content from the web sites.

25

7. (Original) A method of presenting a search result as recited in claim 5, farther including providing a video display of content from the web sites.

8. (Original) A method of presenting a search result as recited in claim 5, further including rating each web site according to whether the web site includes image content that is relevant to textual content on the web site.

9. (Original) A method of presenting a search result as recited in claim 1, wherein the information includes information stored on a DVD.

10

10. (Original) A method of presenting a search result as recited in claim 6, wherein dynamically displaying content from the web sites includes showing representative images from the web site that correspond to textual content in the web site.

11. (Previously amended) A system for presenting a search result comprising:
a processor configured to determine categories for found information by analyzing the content of the information;
a database containing images that correspond to the categories; and
a processor configured to generate a display of images that correspond to the categories;
wherein images corresponding to the found information are displayed when a user activates one of the categories.

12. (Previously amended) A computer program product for presenting a search result, the computer program product being embodied in a computer readable medium and comprising computer instructions for:

- 5 determining categories for found information by analyzing the content of the information;
- correlating the categories with images that represent the categories; and
- displaying images that correspond to the categories;
- wherein images corresponding to the found information are displayed when a user activates one of the categories.

10

13. (Previously amended) A method of presenting information comprising;

analyzing textual content of the information;

generating a signature based on said textual content;

associating the textual content with image content according to said signature;

15 and

displaying the image content to illustrate the information.

14. (Original) A method of presenting information as recited in claim 13, wherein the image content is included in the information.

20

15. (Original) A method of presenting information as recited in claim 13, wherein the image content is not included in the information.

16. (Previously amended) A method of presenting information as recited in claim 13, wherein metadata associated with the image content is correlated with the textual content according to said signature to determine the image content that is associated with the textual content.

5

17. (Original) A method of presenting information as recited in claim 13, wherein the information includes a web site.

18. (Cancelled)

10

19. (Cancelled)

20. (Previously amended) A computer program product for presenting information, the computer program product being embodied in a computer readable medium and
15 comprising computer instructions for:

analyzing textual content of the information;

generating a signature based on the textual content;

associating the textual content with image content according to the signature;

and

20

displaying the image content to illustrate the information.

21. (Previously amended) A system for presenting information comprising:

a processor configured to analyze textual content of the information, generate a signature based on the textual content and associate the textual content with image content according to the signature; and

a display configured to display the image content to illustrate the information.

5

22. (Withdrawn) A method of building enriching content for a video presentation comprising:

analyzing metadata related to the presentation;

associating content with the video presentation based on the analysis:

10

and presenting the content along with the video presentation.

23. (Withdrawn) A method of building enriching content for a video presentation as recited in claim 22, wherein the metadata is close caption information.

15 24. (Withdrawn) A method of building enriching content for a video presentation as recited in claim 22, wherein the metadata is obtained from datacasting.

25. (Withdrawn) A method of building enriching content for a video presentation as recited in claim 22, wherein the content is downloaded from the Internet.

20

26. (Withdrawn) A method of building enriching content for a video presentation as recited in claim 22, wherein the video presentation is presented in an interactive television system.

27. (Withdrawn) A computer program product for building enriching content for a video presentation, the computer program product being embodied in a computer readable medium and comprising computer instructions for:

analyzing metadata related to the presentation;

5 associating content with the video presentation based on the analysis; and
presenting the content along with the video presentation.

28. (Withdrawn) A system for building enriching content for a video presentation comprising:

10 a processor configured to analyze metadata related to the presentation and
associate content with the video presentation based on the analysis;
and a display configured to present the content along with the video presentation.

15
